Introduction. Customer Ratings. How to Write a Good Paper: The Ultimate Guide. "The robot is going to kill us!"... the robot is actually destroying the competition, as Ford, Volkswagen, Honda, BMW and even Tesla must not be ready for the coming challenge. Granted, the AI will do just that and "replace" humans, however, that does not mean it will be the end of the human race. On the contrary, AI will definitely bring a big change in our current industrial system. Overall, as we are facing a revolution in the technology field, the industrial field as well as society, it is almost certain to happen that humans will be replaced by robots in the near future. In the 21st century, only humans have an ability to create the technological progress, such as information revolution. Cpu Augmentation This could be a game changer for corporate IT. A company using this technology might be in line for a job with a Chinese company manufacturing its own robots. Artificial Intelligence Growing Up. On September 27, 2016, CNET reported that IBM was developing a more advanced form of AI based on a breakthrough made by DeepMind. The project is reportedly funded by the US Defense Advanced Research Projects Agency (DARPA). As part of DARPA's Infer project, IBM had made an AI program capable of "unsupervised learning" by observing its environment and then internalizing the rules that govern its interaction with that environment. As reported by CNET, the program uses "an AI that can learn to imagine itself in a different world without needing to experience it directly." Second Life Robot Freedom If this technology works, we could see the rise of humanoid robots. Given the competition, but also the huge potential, we hope that all companies will take the matter seriously and invest in their own AI safety net. Some people have expressed concern that AI is the most important factor in the upcoming technological revolution. An AI revolution would result in radically different forms of industrial manufacturing. Related Articles. Robot vs. Flesh and Blood Robot vs. Flesh and Blood. Why are there so many robots in science fiction movies?. The robots are there to entertain us. Robot Baking However, each time there is a story about a robot that replaces a human in a factory, there is an inevitable uproar from the public. There are two kinds of AI systems, one is useful for humans, the other is dangerous. The first type is AI helper, including Siri, Alexa, and the like
